Dear customer,

**Announcement of the start of analysis contract services
for the new platform
"Olink Explore HT (Olink Proteomics AB)"**

We are pleased to announce that RIKEN GENESIS, CO., LTD will begin offering contract analysis services for Olink Explore HT, the latest proteome analysis platform from Olink Proteomics (Sweden).

The "Olink Explore HT" has the capability to simultaneously analyze approximately 5,400 different proteins, allowing the discovery of a wide range of biomarkers from minute amounts of serum and plasma samples. The introduction of this platform will significantly enhance the accuracy and efficiency of protein quantitative analysis in clinical research and drug development.

The "Olink Explore HT" employs an innovative analysis technology that combines immunoassay and next-generation sequencing, achieving high specificity and multiplexing. This advanced platform is expected to meet a wide variety of drug development needs, including target identification for drug discovery, patient stratification, and post-clinical biomarker discovery.

RIKEN GENESIS Co., LTD has established a high-quality service delivery system, including ISO 15189 accreditation. We will continue to contribute to the success of researchers and medical institutions through our cutting-edge proteome analysis technology.
